We see things differently.

Lindsay's Legacy Foundation was founded in 2019 to honor the life of Lindsay Presz Barrett after her death due to AML (Acute Myeloid Leukemia). The organization was formed by Lindsay's sister, Stephanie, brother-in-law, T J McKenna, Mother, Carla Presz in addition to other close family members to remember Lindsay, her journey and profound message of HOPE.

We understand, both from a research perspective and a patient & family perspective, how important clinical trials are and the HOPE that they can offer. Our mission at Lindsay's Legacy Foundation is to support research for clinical trials and drug development so together we can be part of the cure.

A Message from our Chairman

**Be Inspired. Be Happy.
Spread Hope**

In this report, we highlight the areas in which we have made the most impact and set our goals for the year ahead - all on behalf of Lindsay's Legacy Foundation and Cancer patients and their families.

As a charity funded entirely through the generosity of donors, we would like to thank everyone that has contributed to our work. Whether through fundraising, volunteering, participation, making a donation or attending one of our fundraising events - every single action means we can continue to encourage and support cancer patients and the families ~ those who need us most.

-Thank you as always for your support!

TJ Mckenna

LINDSAY'S LEGACY

Mission

Lindsay's Legacy Foundation is built on financially assisting patients, families and researchers in finding HOPE on the journey to becoming cancer free

Vision

Every day, families unprepared for what lies ahead begin a journey to fight a cancer diagnosis. Join us in helping them find hope for a better tomorrow.

LINDSAY'S LEGACY

What we live by

Our bee symbolizes the power of collective action. A single bee can visit 5,000 flowers in a day, but a beehive can pollinate 500 million flowers in a year. Individually we can do a lot but collectively we can change the world. We choose this symbol because of all that we are capable of together.

Lindsay's Legacy Foundation

Our Be Inspired Program

In 2021 we launched our newest program, "Be Inspired", which is dedicated to direct patient support. We strive to provide patients with projects and tools, to bring them joy and ease their minds, so they may be positive and find HOPE for the journey ahead.

We at LLF understand the importance of having a strong mind and uplifting environment when navigating a cancer diagnosis.

OUR CORPORATE SPONSORS

The financial support of our Corporate Sponsors enable us to inspire hope for countless patients. With our partnerships, together we are supporting research and clinical trials. One day we may be able to prevent, treat and cure cancer.

Thank you!

LINDSAY'S LEGACY

Alwaysbehappy.org

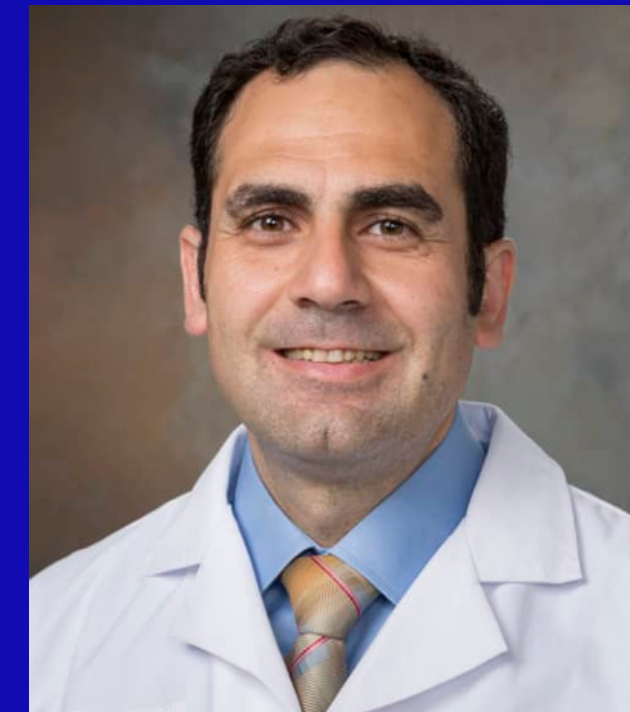

DR. AMER ZEIDAN, MBBS MHS

Associate Professor Early Therapeutics Research
Director / CME Director

"Working with LLF allows me to continue my research on using immune therapies for leukemias"

Dr. Zeidan specializes in the management of blood cancers especially MDS and acute myeloid leukemia (AML). He is a nationally recognized expert in the clinical management of these diseases and is a member of the National Comprehensive Cancer Network (NCCN) clinical guideline panel for MDS. The focus of Dr. Zeidan's clinical/translational research is the development of novel therapies for MDS, AML, and other hematologic malignancies. Dr. Zeidan is the principal investigator on several clinical trials in MDS, AML and other hematologic malignancies. Dr. Zeidan especially focuses on the use of immunotherapies (drugs that stimulate the patient's own immune system) including the immune checkpoint inhibitors to fight blood cancers.

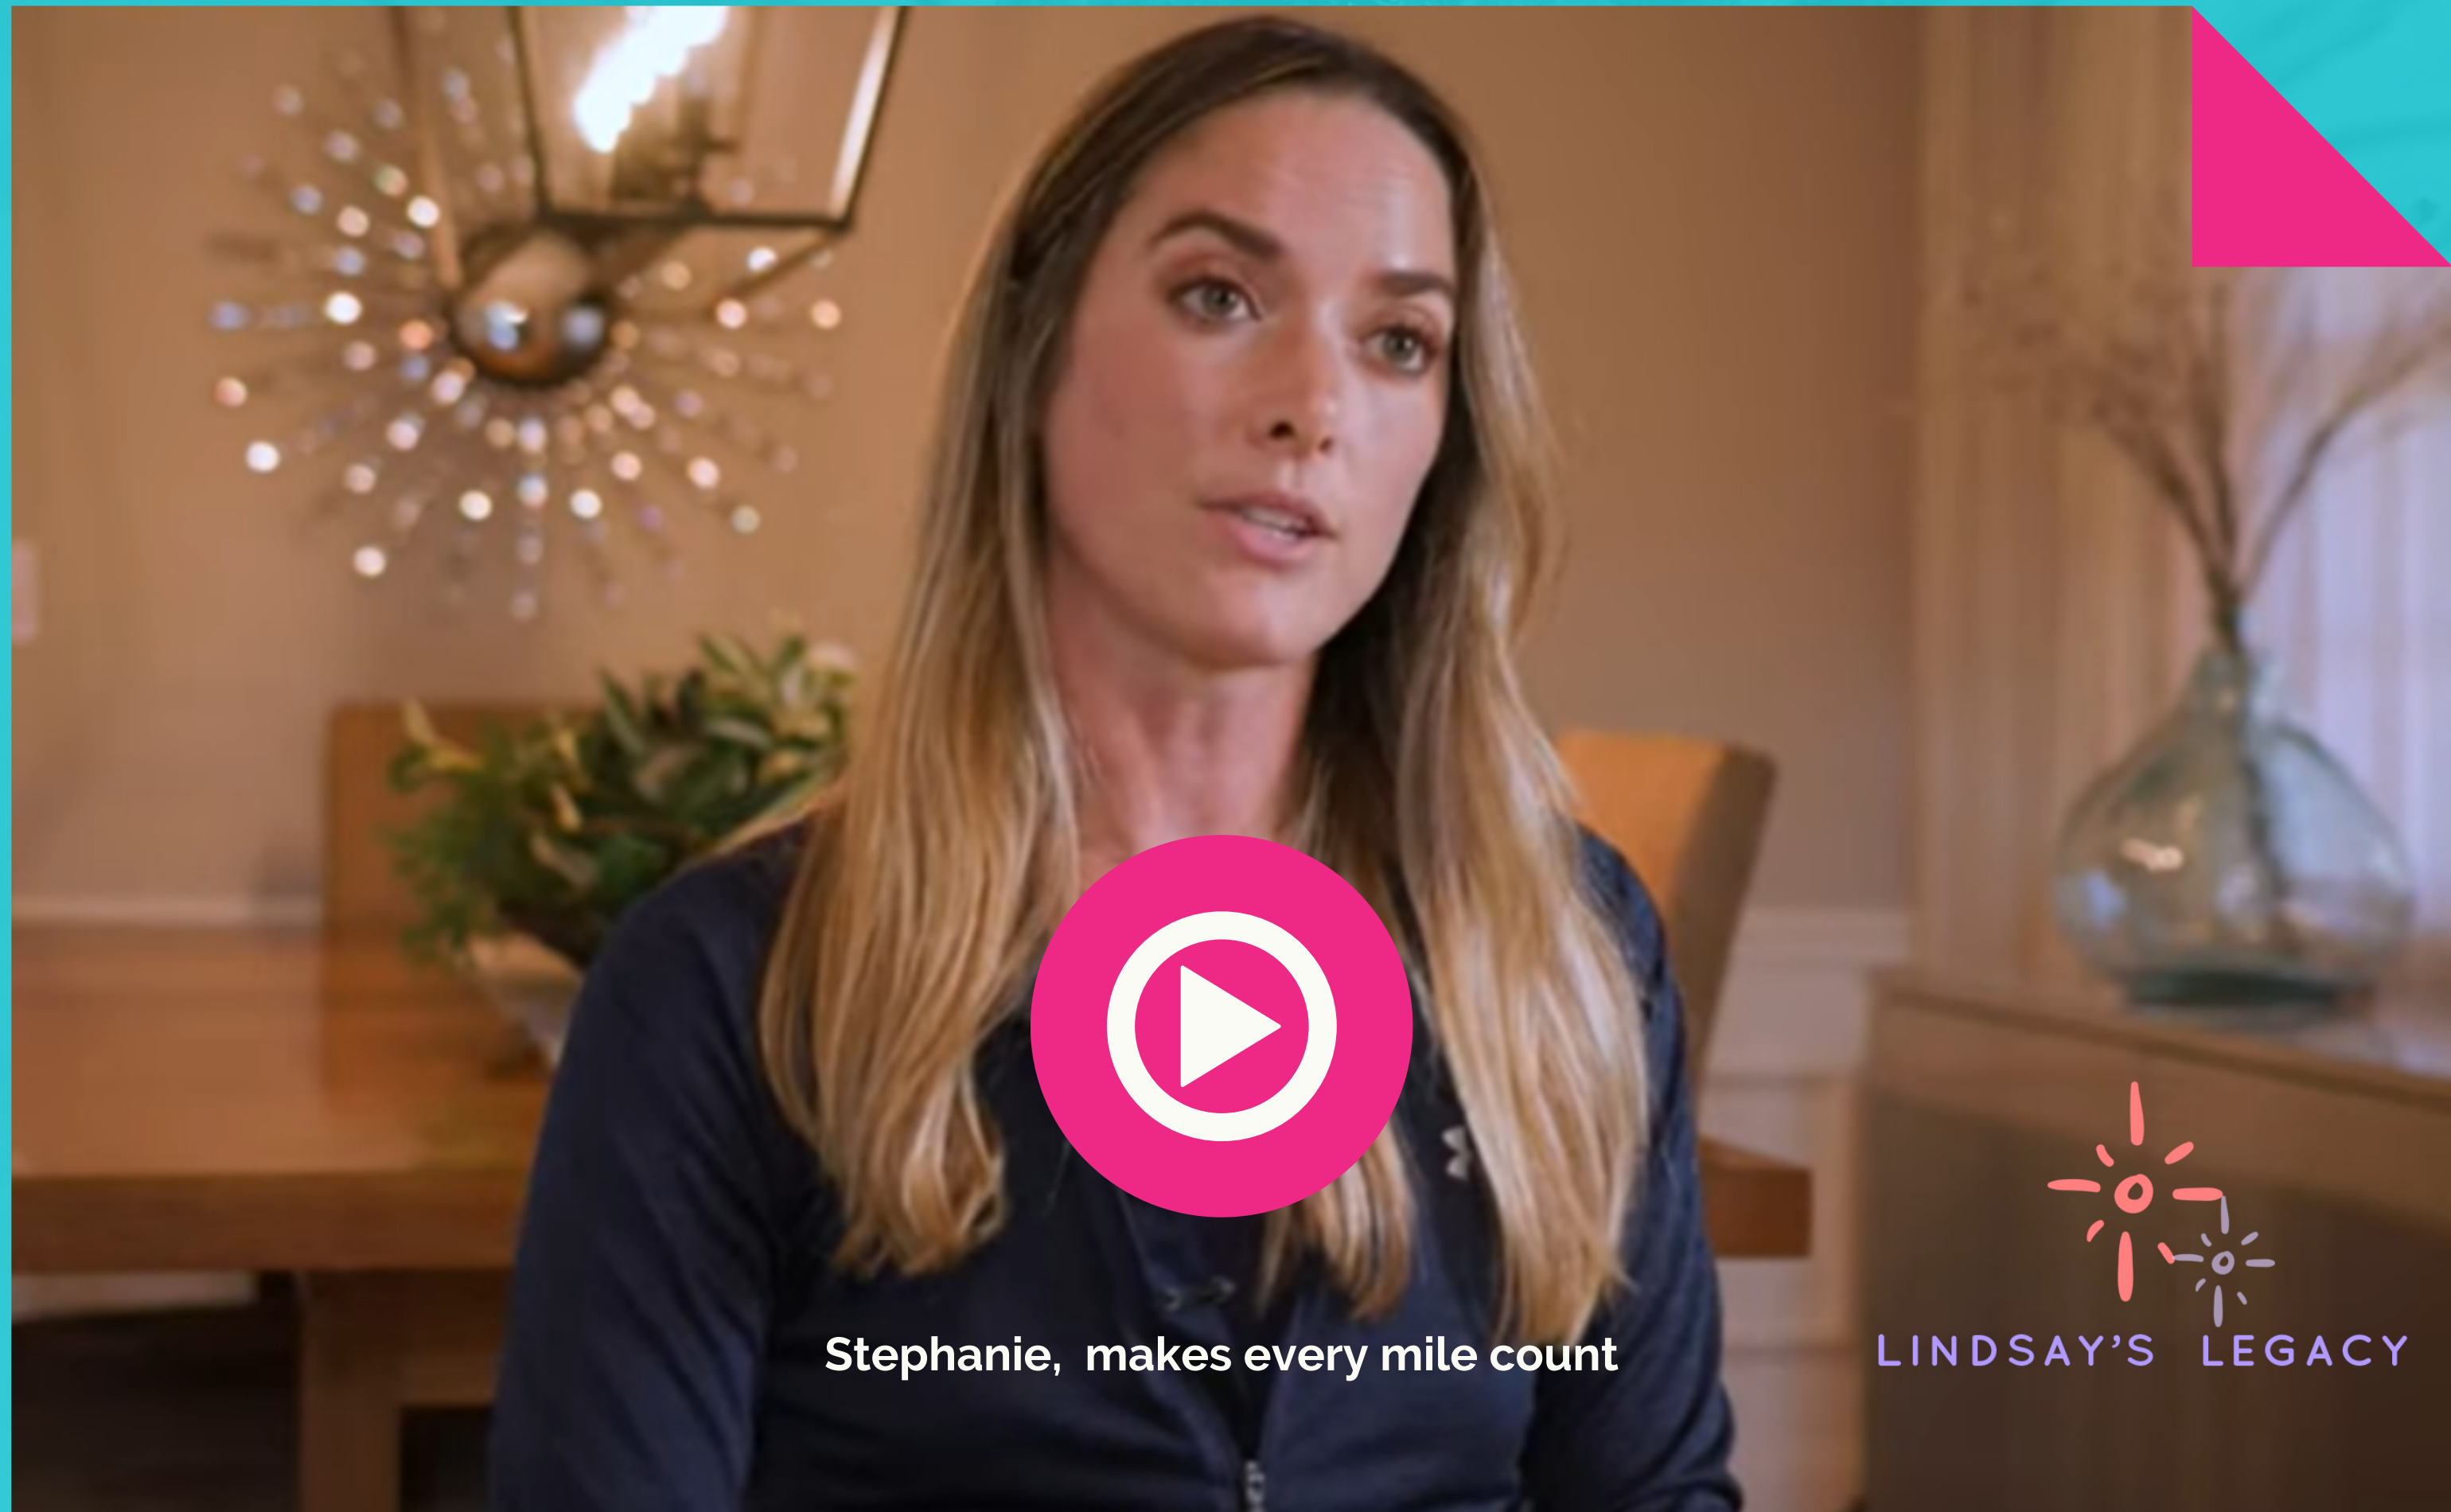

The second area of research interest for Dr. Zeidan is effectiveness and outcomes research in hematologic malignancies; a type of research that evaluates how much benefit do patients achieve from existing treatments at the real-world community level in comparison to what is seen in the controlled clinical trials setting. Dr. Zeidan conducts this research within the Cancer Outcomes, Public Policy, and Effectiveness Research (COPPER) Center at Yale University.
